## PERISTALTIC CHEMICAL METERING PUMP

**Standardize on one chemical feed solution with the FLEXFLO® A1F** Peristaltic Chemical Metering Pump. The new A1F is ideal for use when metering off-gassing chemical, such as sodium hypochlorite and peracetic acid. It maintains smooth chemical feed and will never loose prime. There are no check valves that could clog and maintenance procedures are kept to a minimum.

The A1F's 1000:1 turndown ratio allows the user to standardize on one pump for all chemical feed applications. The large turndown ratio capability is due to the energy efficient brushless DC motor, and the motor is not subject to overheating. The motor runs cool and reduces power usage for a high energy efficiency rating.

Other A1F features include: Feed rates to 21.19 LPH (5.60 GPH), pressures to 6.89 bar (100psi), sealed weather-proof enclosure, patented Tube Failure Detection, wall and shelf mount brackets, heavy-duty weather-proof display shield, self-adjusting power supply, and a three year warranty.
