Basic Description

Xtimate series HPLC columns derive their outstanding performance from a special hybrid particle technique. A unique 5nm organic/inorganic polymer layer on the silica surface ensures high column efficiency, mechanical strength, and resolution, as well as wide pH range (1.0-12.5) application. Xtimate series HPLC columns are designed for method development and have demonstrated high stable performance and long lifetime in nearly all types of mobile phase or high temperature use.

Xtimate series columns have the bonding phases: C18, C8, C4, CN, NH2, Phenyl-Hexyl, Polar RP, SEC120, SEC300, SEC500, SEC700, SEC1000, PS-DVB, Sugar-Ca, Sugar-H.

Key Features

- Ultra-pure spherical porous silica, purity > 99.999%
- Unique stationary phase bonding and double end-capping technique
- High column efficiency: Theoretical Plates > 90,000/m
- Good peak symmetry: Tailing Factor: 0.95-1.05
- Wide pH range: 1.5-12.0
- Good lot-to-lot reproducibility
- Good peak shape in the determination of easy-to-tail alkalis under neutral condition
